

Information sheet:

Replacement of smoke alarms now in full swing

Smoke alarms ensure your safety in all our flats and must be replaced at the latest after ten years (and six months) after their initial operation. Otherwise, there is a danger that older devices will no longer reliably trigger in the event of a fire.

Techem Energy Services GmbH, the company commissioned by us, has now started replacing the smoke alarms.

You will not incur any costs for this work.

Techem and our company will notify you on house notices in good time of the date on which the smoke alarms are to be replaced.

To enable the work is carried out without a hitch, it is particularly important to keep this appointment.

You do not need to be there while the work is carried out. Neighbours or friends can also grant access to your flat.

Functioning smoke alarms warn you and the occupants of the house in the event of a fire. Please work with us in replacing the smoke alarms. Otherwise you and the occupants of the house are at serious risk of death in the event of a fire.
